

EDGE AI – BASED PATIENT MONITORING AND ASSISTANCE SYSTEM

HOSPITAL DETAILS

- Hospital Name: Surya Polyclinic
- Address: No 92, Surya Poly Clinic, Near Arun Hospital, New Scheme Road, Bazaar, Pollachi-642001, Tamil Nadu
- Doctor Consulted: Dr. Soundararajan

OBJECTIVE

The objective of this field visit was to study the existing patient alert methods used in hospitals and to get professional feedback for our proposed Patient Monitoring and Alert System.

VISIT DETAILS

We visited Surya Polyclinic and discussed with Dr. Soundararajan about current patient monitoring practices. He explained that patients mostly use manual bells to call caregivers. These bells do not provide information about the patient's exact need, which may cause delays in response.

FEEDBACK

Dr. Soundararajan found our proposed system useful and practical. He stated that a smart alert system showing the patient's requirement would improve response time and patient care, especially for elderly and bedridden patients.

CONCLUSION

The field visit helped us understand real hospital needs. The feedback confirmed that our project can improve communication between patients and caregivers and enhance hospital efficiency.
